

3407. Substring Matching Pattern

Easy  Topics  Companies  Hint

You are given a string `s` and a pattern string `p`, where `p` contains **exactly one** `***` character.

The `***` in `p` can be replaced with any sequence of zero or more characters.

Return `true` if `p` can be made a **substring** of `s`, and `false` otherwise.

Example 1:

Input: `s = "leetcode"`, `p = "ee*e"`

Output: `true`

Explanation:

By replacing the `***` with `"tcode"`, the substring `"eetcode"` matches the pattern.

Example 2:

Input: `s = "car"`, `p = "c*v"`

Output: `false`

Explanation:

There is no substring matching the pattern.

Example 3:

Input: `s = "luck"`, `p = "u*"`

Output: `true`

Explanation:

The substrings `"u"`, `"uc"`, and `"uck"` match the pattern.

Constraints:

- `1 <= s.length <= 50`
- `1 <= p.length <= 50`
- `s` contains only lowercase English letters.
- `p` contains only lowercase English letters and exactly one `***`
